Bergey's Manual of Systematic Bacteriology is the main resource for determining the identity of prokaryotic organisms, emphasizing bacterial species, using every characterizing aspect.. The manual was published subsequent to the Bergey's Manual of Determinative Bacteriology, though the latter is still published as a guide for identifying unknown bacteria.

Bacterial taxonomy is the taxonomy, i.e. the rank-based classification, of bacteria.. In the scientific classification established by Carl Linnaeus, each species has to be assigned to a genus (binary nomenclature), which in turn is a lower level of a hierarchy of ranks (family, suborder, order, subclass, class, division/phyla, kingdom and domain). In the currently accepted classification of ...

La coloration de Gram doit son nom au bactériologiste danois Hans Christian Gram qui mit au point le protocole en 1884. C'est une coloration qui permet de mettre en évidence les propriétés de la paroi bactérienne, et d'utiliser ces propriétés pour distinguer et classier les bactéries.Son avantage est de donner une information rapide, facile et bon marché sur les bactéries ...
