Along with enabling cost control on a query level, you can apply similar logic to users and projects as well.. Use partitioning and clustering: Partitioning and clustering your tables, whenever possible, can help greatly reduce the cost of processing queries, as well as improve performance. Today, you can partition a table based on ingestion time, date, timestamp or integer range column.

Management experts are always considering ways of being able to quantify the less tangible factors of management performance. An example of such a tool is the balanced scorecard method. The balanced scorecard method is a management tool that allows businesses to define their aims and put them into action.
