How Science Has Revolutionized the Understanding of Drug Addiction For much of the past century, scientists studying drugs and drug use labored in the shadows of powerful myths and misconceptions about the nature of addiction. When scientists began to study addictive behavior in the 1930s, people with an addiction were thought to be morally flawed and lacking in willpower.

Together with emotion, motivation is part of a core psychological phenomenon referred to as an affect. It is distinct from cognitive processes that are rational and calm because motivation and emotion involve physiological arousal. This bodily response, created by the sympathetic nervous system, causes our heart to pump more blood, our respiration to increase, our pupils to dilate to help us ...

Substance abuse, also known as drug abuse, is the use of a drug in amounts or by methods which are harmful to the individual or others. It is a form of substance-related disorder. Differing definitions of drug abuse are used in public health, medical and criminal justice contexts. In some cases, criminal or anti-social behaviour occurs when the person is under the influence of a drug, and long ...

This is a very controversial issue in the world of psychology, and I'm going to tell you that right up front. There are psychologists who believe it is personality that determines a person's behavior more than anything else, and there are psychologists who believe it is circumstances that influence behavior more than anything else - more than character and/or personality.

Drugs and Supplements. Some people with Down syndrome take amino acid supplements or drugs that affect their brain activity. However, many of the recent clinical trials of these treatments were poorly controlled and revealed adverse effects from these treatments. Since then, newer psychoactive drugs that are much more specific have been developed.

Clinical data. Epidemiological data support a protective effect of ginseng on nonspecific organ cancers.6, 14 A long-term study of ginseng 1 g taken weekly for 3 years among adults with long-term atrophic gastritis showed no effect on the overall relative risk of cancer. In the male subgroup analysis, there was a reduction in the risk of non-organ-specific cancers.14
