In physics and engineering contexts, especially in the context of diffusion through a medium, it is more common to fix a Cartesian coordinate system and then to consider the specific case of a function $u(x, y, z, t)$ of three spatial variables (x, y, z) and time variable t . One then says that u is a solution of the heat equation if $\nabla^2 u = -\rho$ in which ρ is a positive coefficient called the ...

Natural antioxidants are essential potential sources for protecting the oxidation of food oils. However, until now, the mechanisms are still not very clear, especially from the quantitatively theoretical level to analyze the antioxidant behavior. In this work, the micromechanisms of the antioxidant behavior affected by polarity in the olive oil were systematically investigated by experimental ...

Orbital motion in atomic, nuclear, and particle physics is usually referred to as orbital angular momentum rather than revolution. In astronomy, revolve normally refers to orbital motion and rotate normally refers to spinning on an axis. QUESTION: If time is affected by both mass and speed (ie. the faster you go and the closer you are to a ...

Brownian motion refers to particles suspended, not to other gases or liquids. The carbon dioxide will diffuse into the rest of the gas. The rate of diffusion and the time it takes depends on many things that you have not given information about like temperature, volume, pressure, etc.

Branch jumping reclassifies or relocates something to another branch of the same tree, e.g., reclassifying the whale as a mammal rather than a fish, the earth as a planet, or Brownian motion as a physical rather than a biological phenomenon. New branches can appear and old branches can be eliminated.
