In classical physics and special relativity, an inertial frame of reference is a frame of reference that is not undergoing acceleration. In an inertial frame of reference, a physical object with zero net force acting on it moves with a constant velocity (which might be zero)—or, equivalently, it is a frame of reference in which Newton's first law of motion holds.

Aerodynamics, from Greek ???
aero (air) + ??????????
(dynamics), is the study of
motion of air, particularly
when affected by a solid
object, such as an airplane
wing. It is a sub-field of
fluid dynamics and gas
dynamics, and many aspects
of aerodynamics theory are
common to these fields. The

Sensitivity to geometry has also been noted in fluid mechanics. Spurious entropy layers about aerodynamic shapes were the bane of compressible Euler solvers in the 1980s and 1990s. The problem and its solution were identified in the thesis of Barth . Piecewise linear approximations of geometry were the root cause.
