The use of metrics is a firmly established tool for agri-environmental assessments (OECD, 2013; Weaver and Jordan, 2008), and increasingly so for food systems research. Metrics are perceived as useful to shed light on complex dynamics in food systems, allowing decision-makers to better navigate the system.

Education for sustainability (EFS) is about transformative change at many levels—our thinking, our ways of being and our ways of acting to regenerate the Earth. Many educators readily engage in the tangible aspects of EFS in early childhood services, such as establishing compost bins, recycling and growing produce.

First, futures thinking differs depending on what stage of life one is in. For example, the future of a teenager is likely to be shorter-term oriented (because of brain development) than that of an adult. Vulnerability is likely to be more of a factor for the elderly than for a young adult. Second is the microhistory that frames life stages.
