Coming out of the East, the Black Death reached the shores of Italy in the spring of 1348 unleashing a rampage of death across Europe unprecedented in recorded history. By the time the epidemic played itself out three years later, anywhere between 25% and 50% of Europe's population had fallen victim to the pestilence.

Plague is an infectious disease caused by the bacterium *Yersinia pestis*. Symptoms include fever, weakness and headache. Usually this begins one to seven days after exposure. There are three forms of plague. The difference between the forms of plague is the location of infection; in pneumonic plague the infection is in the lungs, in bubonic plague the lymph nodes, and in septicemic plague ...

The Great Plague fast became an epidemic – the infectious disease spread at a rapid rate in a very short period of time, affecting a large number of people. People feared the plague – probably because there was still no cure and it killed people at an alarming rate with victims dying within days of catching the illness .
