Notes on Plant Physiology. 1. Transport in Plants: As described earlier, plant physiology is the study of life-sustaining functions and as plants do not show locomotion, it is of utmost importance to understand how are they taking up various nutrient and water from the surrounding. Therefore, the chapter transport in plant deals with the ascent of sap and translocation of food.

Plant physiology is the study of plant function and behaviour, encompassing all the dynamic processes of growth, metabolism, reproduction, defence, and communication that account for plants being alive (Salisbury & Ross, 1992; Baluška et al., 2006; Scott, 2008). Considering that most of these processes take place at the level of cells, tissues ...
